New generation stairlift

Developments in the field of stairlifts were at a stand-still for a long time. Now there is the UP from DeVİ-Stairlifts. A stairlift that, thanks to the patented modular rail construction, can be installed on every staircase. You can easily configure the stairlift on the webshop. Besides, DeVİ-Stairlifts has taken furniture designer Richmond on board who has created a very comfortable seat with a beautiful design.

Features

Intercom

In case of emergency it is possible to reach our servicedesk with one press on the button, with the built-in intercom.*

Foldable seat

From comfort to a slim design with the foldable leather seat, which is available in different colors.

*By choosing the annual service option.

Foldable armrests

Space is important when purchasing a stairlift. The UP stairlift ensures a slim design because of the foldable armrests.

Automatic footrest

Besides folding automatically after use, the footrest also ensures that the stairlift will stop when something blocks the stairlift.

Color options

Vintage antracite

Vintage cognac

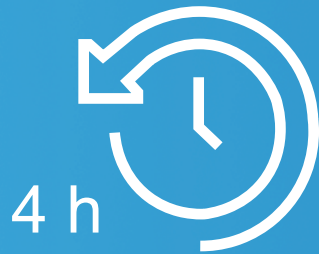

Vintage sand

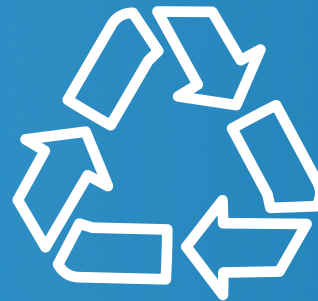

Vintage brown

Unique characteristics

Quick installation

Quick installation and adjustments are possible thanks to the modular rail and patented curved sections. Within 4 hours the entire stairlift can be installed and intervention from a factory is not necessary.

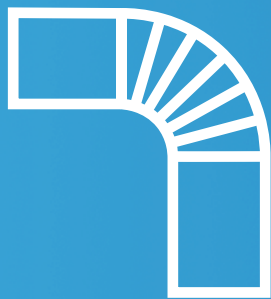

Relocation possible

The stairlift can be easily relocated. Not only is the motor unit retained but also the seat. All parts of the rail can easily be converted to a new shape and can if necessary, without any problems, be combined with new rail elements.

Webshop

With our UPwebshop you can easily choose your desired stairlift color and configure the best stairlift for your stairs in a few clear steps. You can then order this and we take care of the assembly. If you want support with the configuration our consultant will gladly help you further.

Straight and curved application

Because of its modular construction, the UP stairlift is suitable for both straight and curved staircases. On a curved staircase, the stairlift can be placed on the inside or outside.

Complete as standard

Other stairlift suppliers offer rail lighting, automatic turning (swivel) and foot plates as an option, for the UP this is standard. In addition you will get a stylish seat, designed by Richmond.

Remote Service

The chair lift is able to report the maintenance status and any problems via the integrated WiFi-connection. This means that most difficulties can be solved remotely. In addition, with this information the engineer is able to prepare properly and plan his maintenance routes more appropriately.

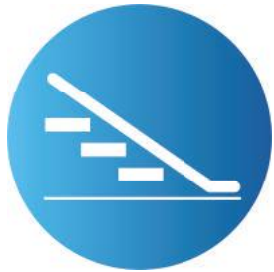

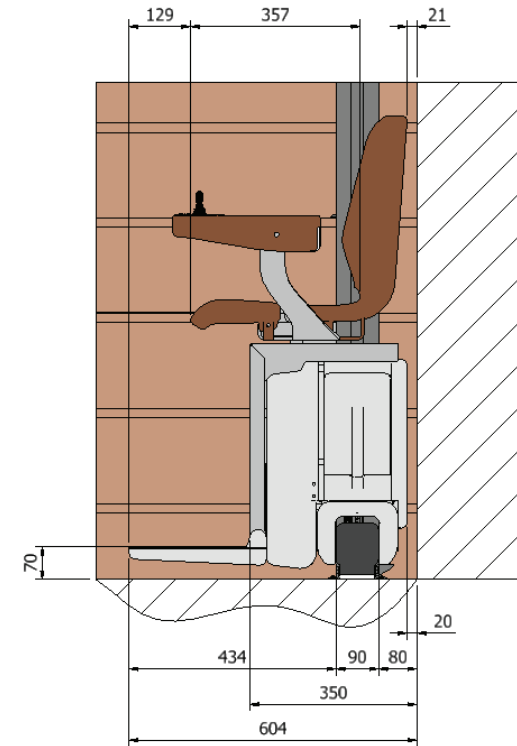

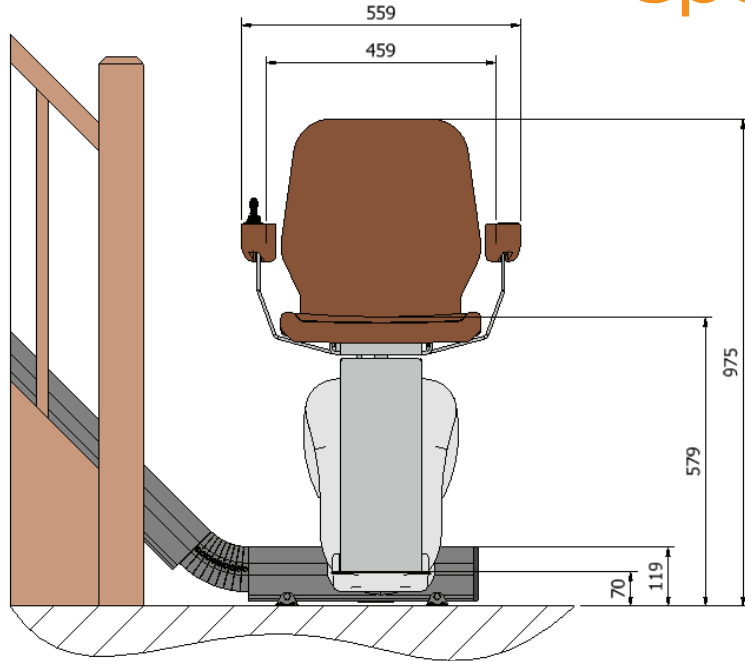

UP is 100% recyclable. Where other stairlifts are not always reusable and end up in storage places or waste, reusing our UP rail is as easy as it gets.

In Europe 25.000 curved stairlifts, with a total value of €150.000.000,- end up as trash every year.

**It is not only money!
Producing a stairlift rail comes with a huge amount of CO2 production.**

Specifications

Horizontal

When you want to keep space on the stairs, it is possible to park the stairlift further from the stairs by using the horizontal endpiece.

Hinge rail

If the other options are taking too much space, you can choose for the option hinge rail. The hinge rail folds automatically after use.

Drop nose

The drop nose end piece ensures a compact rail because it is running down steeply.

Parkingcurve 90 degree

Due to the modular railparts curves can be made easily. With the 90 degrees parkingcurve the stairlift will be parked next to the stairs.
